AlumniConnect

A verified alumni, achievement and placement network for Your College Name

Prepared for the IQAC

Live demo: alumniconnect-cpva.onrender.com

How alumni data is handled today

30,000+

alumni files exist only on paper, with nothing stored online

Every year

IQAC collects NAAC and NIRF data by hand from forms and email

No link

between current students and the seniors who could guide them

- Achievements are self-reported, so nobody can rely on them.
- Placement and higher-studies figures are counted manually for each report.
- Graduates drop out of contact once they leave.

One platform, four kinds of users

Students

Build a verified profile from 1st year and find seniors who took the path they want.

Alumni

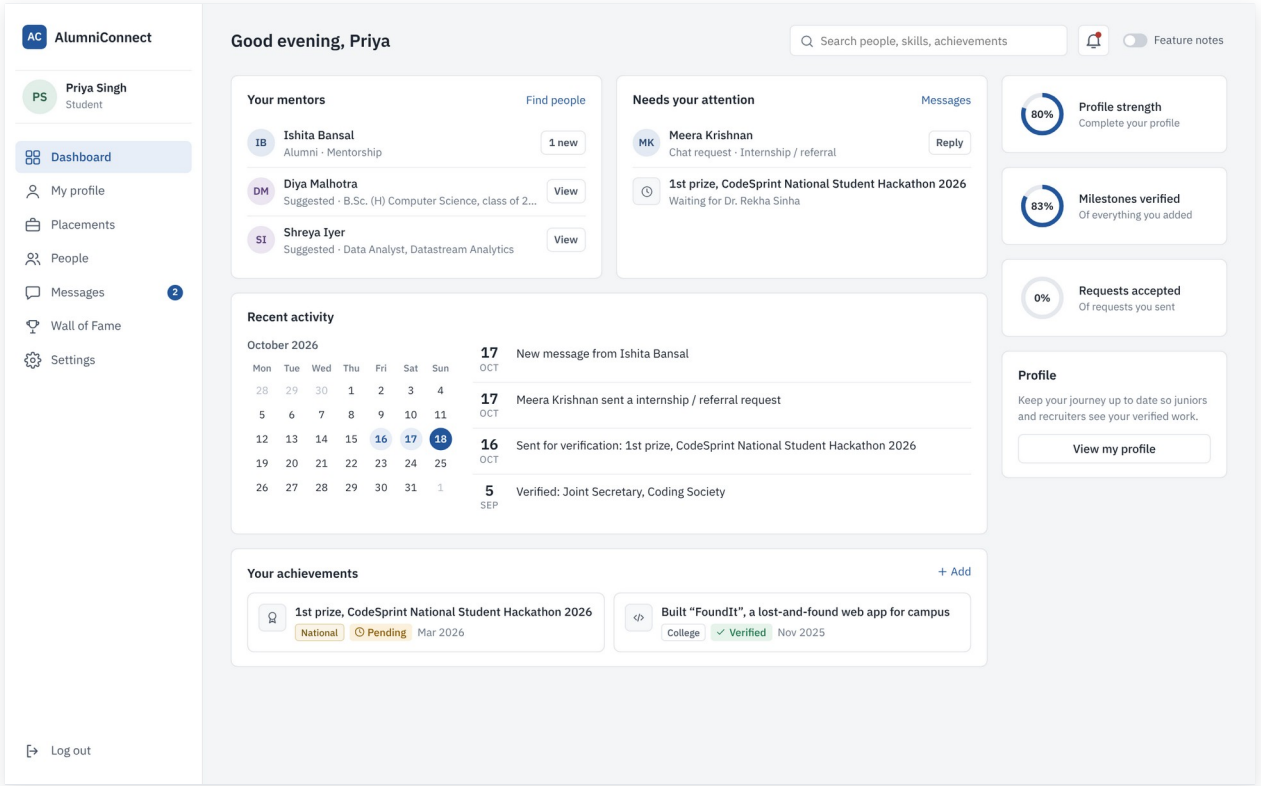

Keep their status current, mentor juniors, and fill the alumni form online.

Faculty

Approve achievements in one click with the proof in front of them.

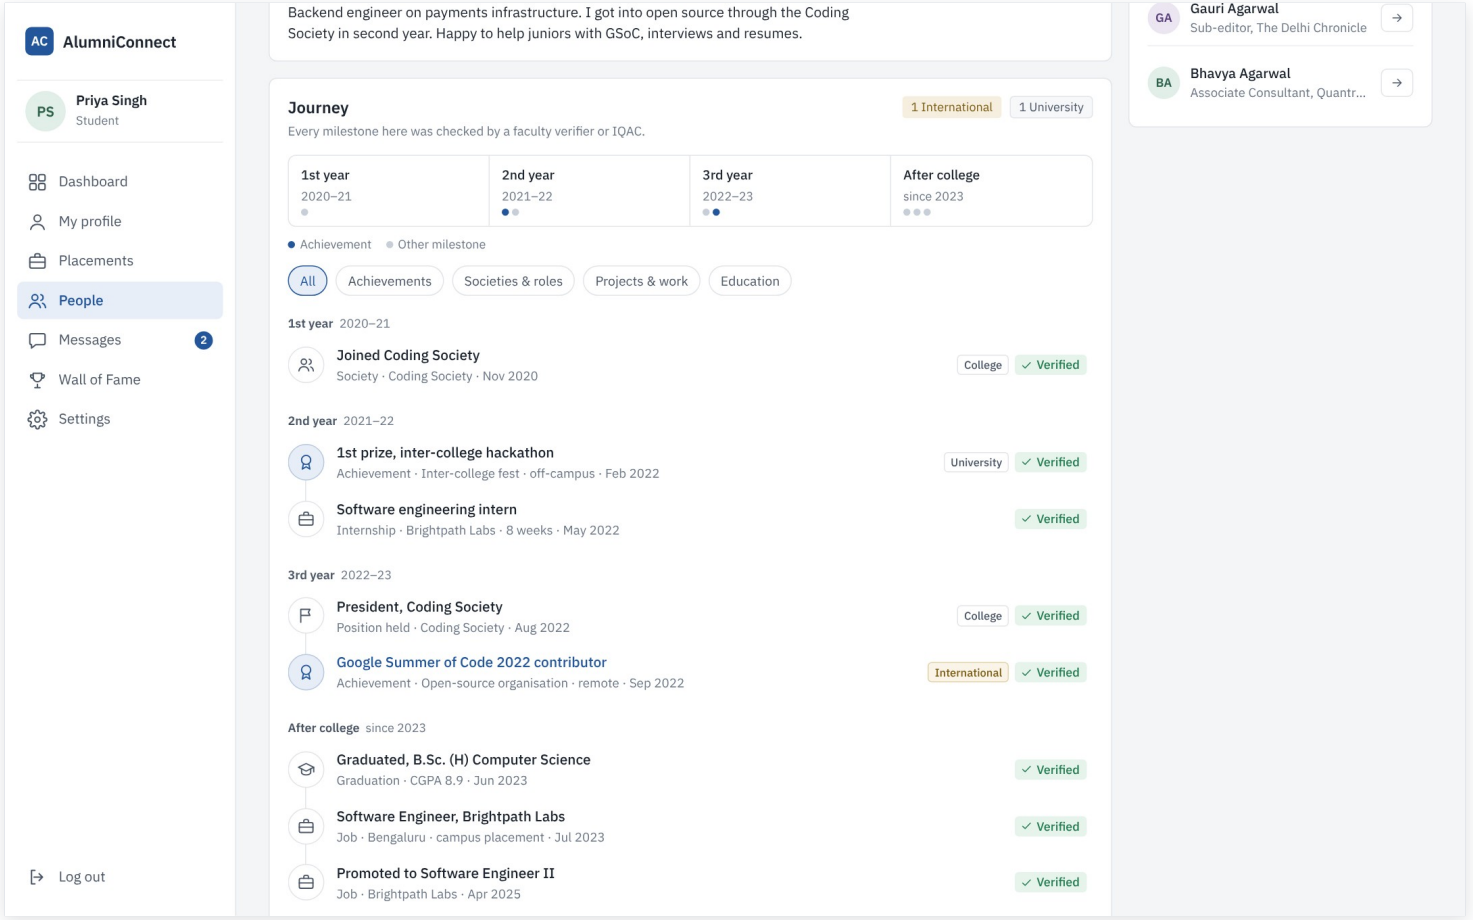

IQAC

Digitize old records and get placement, NAAC and NIRF numbers instantly.

Student dashboard: mentors, things waiting, activity and progress

Profiles that show a verified journey

An alumna's profile as a student sees it (sample data)

Year by year

Societies, roles, internships and achievements laid out from 1st year to career.

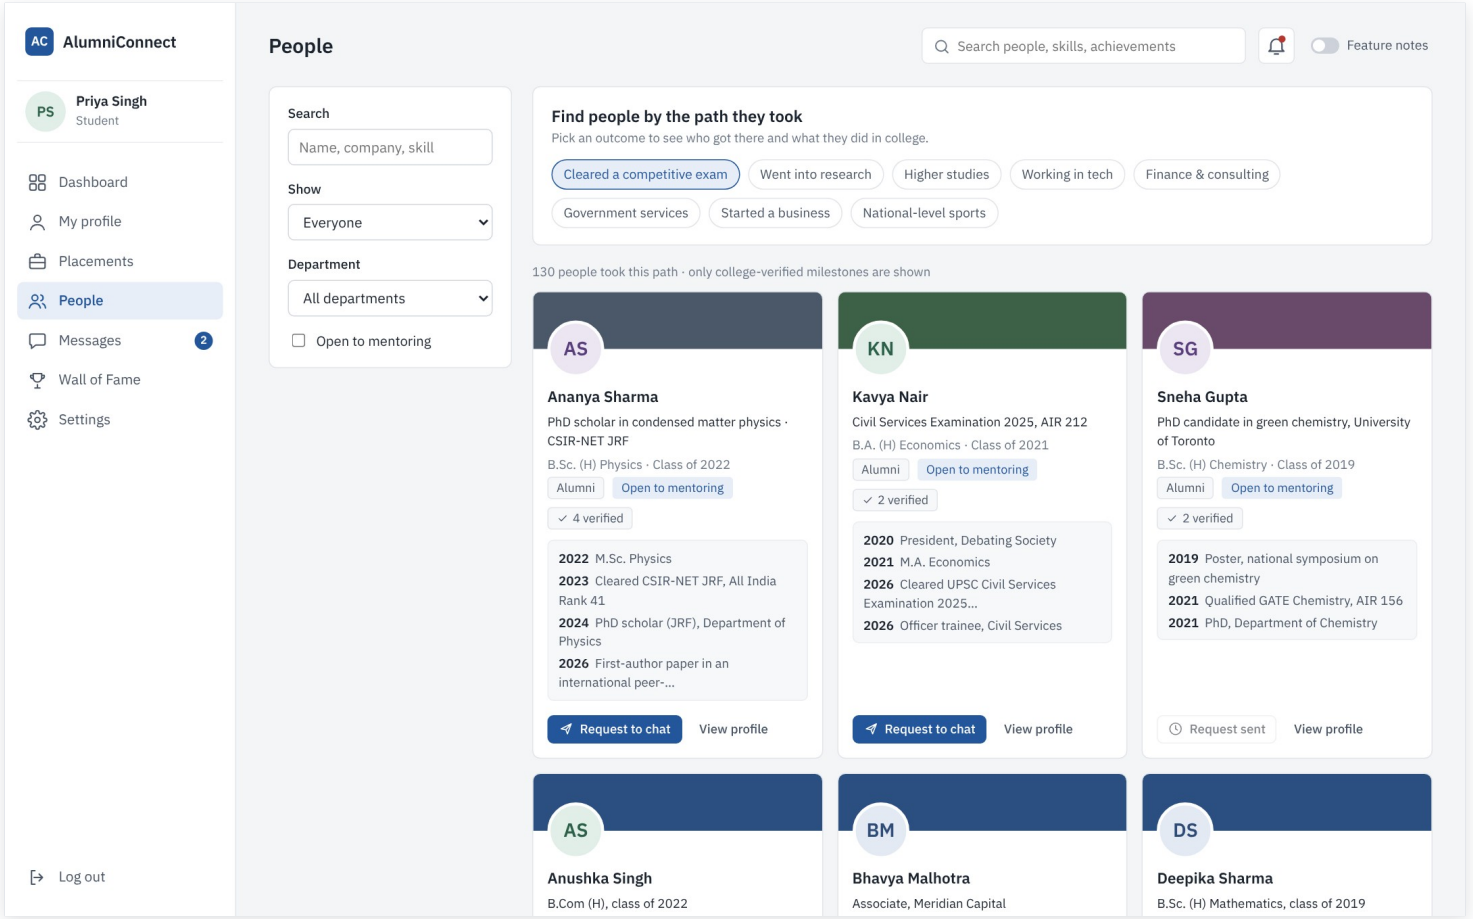

Verified by the college

Each milestone shows who verified it and when. Others see only verified items.

One shareable link

A profile students can put on a resume instead of self-claimed lines.

Find seniors by the path they took

People who cleared a competitive exam (sample data)

Search by outcome

Cleared a competitive exam, went into research, working in tech, started a business.

See how they got there

Each result shows the milestones that led to the outcome.

Filters

Department, alumni or students, and who is open to mentoring.

Mentoring chat that starts with a request

Request first

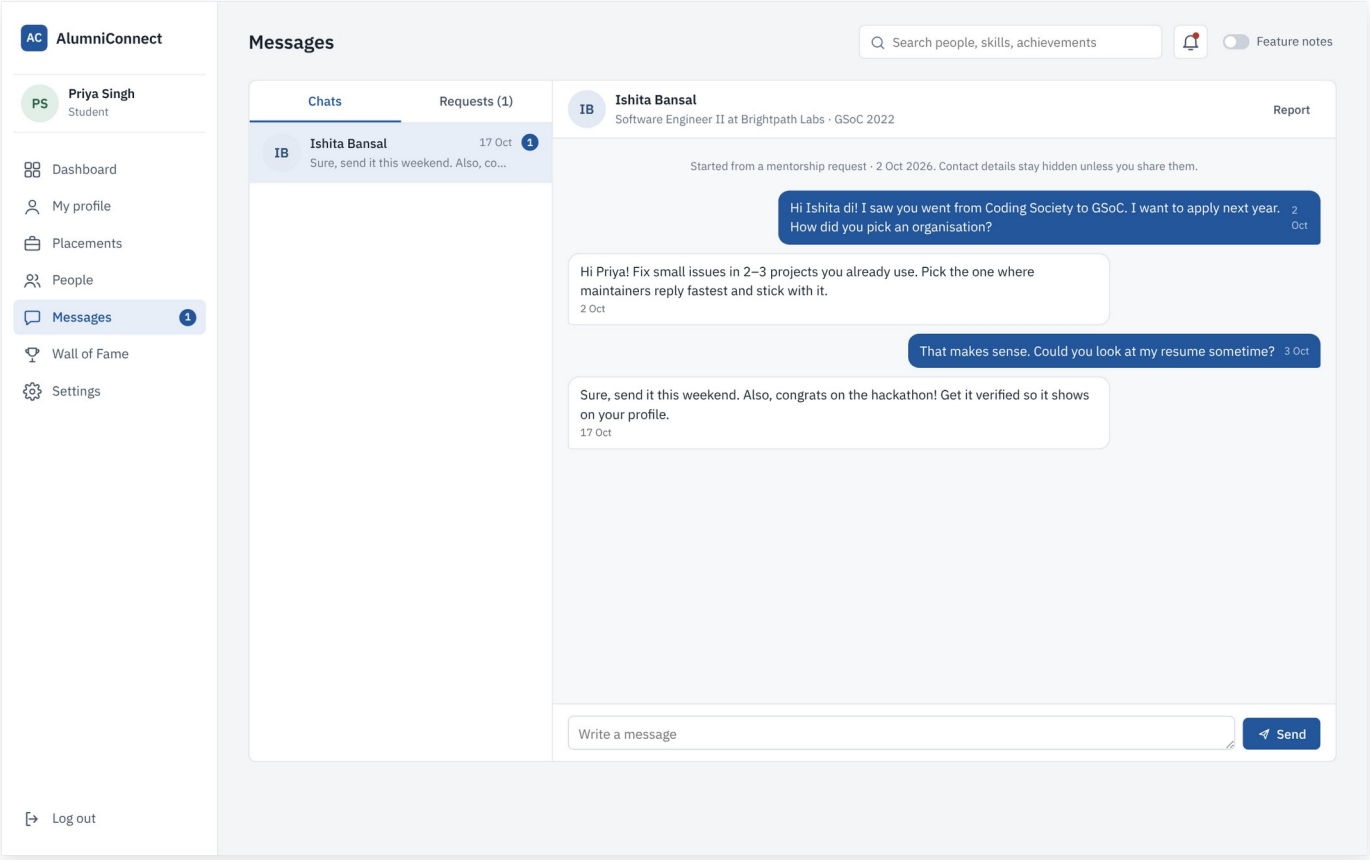

A student sends a short note and a purpose. The chat opens only if the senior accepts.

Private by default

Phone numbers and emails are never shown. Anyone can turn requests off or report a user.

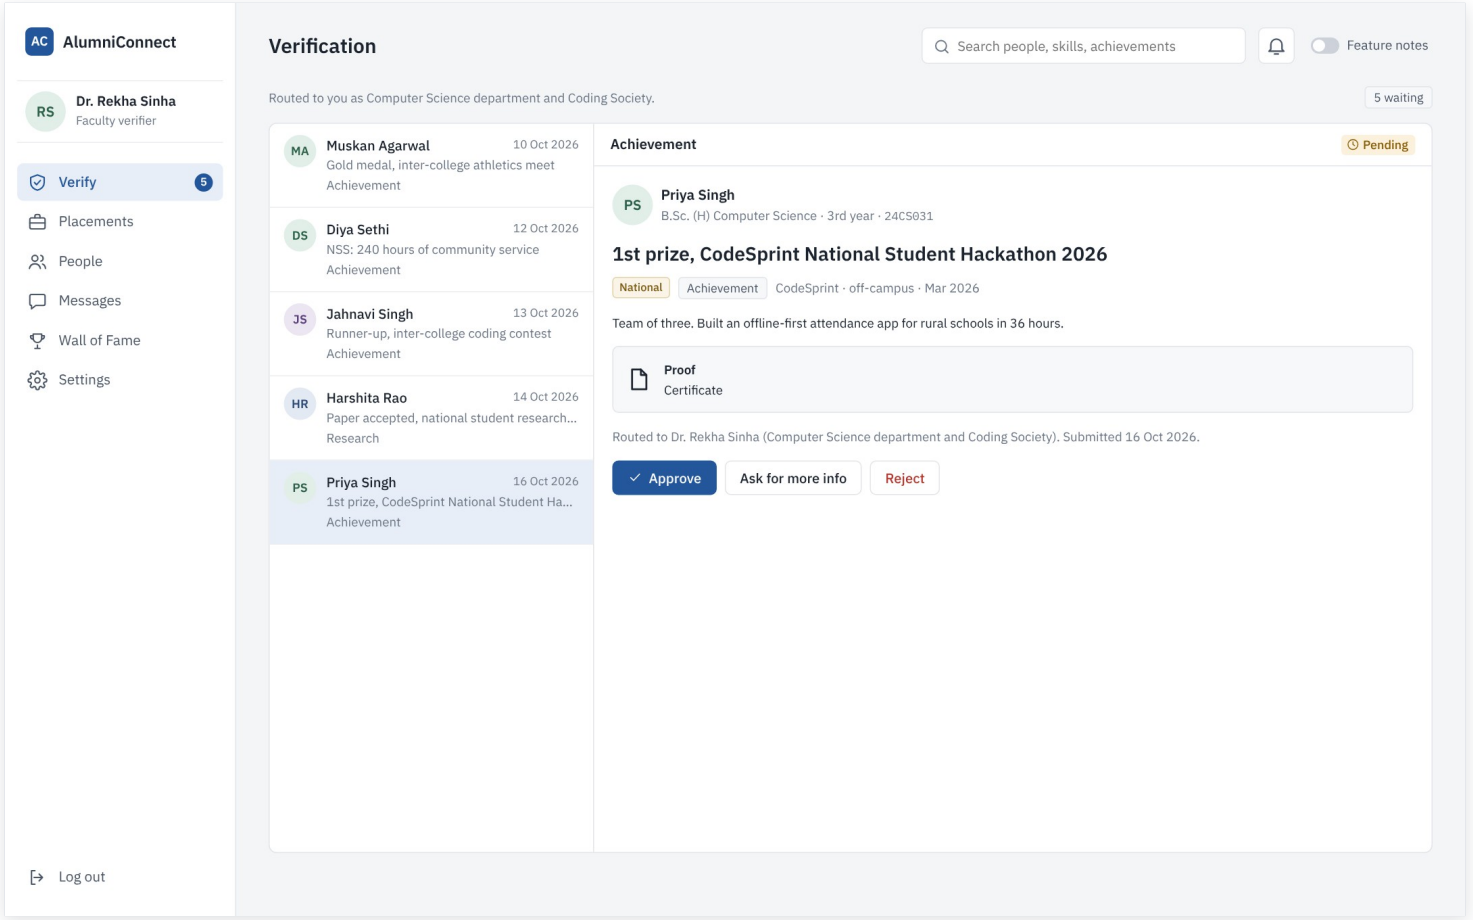

Counts as engagement

Accepted requests feed the NAAC alumni engagement report.

Students, alumni and faculty can chat. The IQAC admin account cannot.

Faculty verify every achievement

Proof attached

Certificate or link, level (college to international) and date.

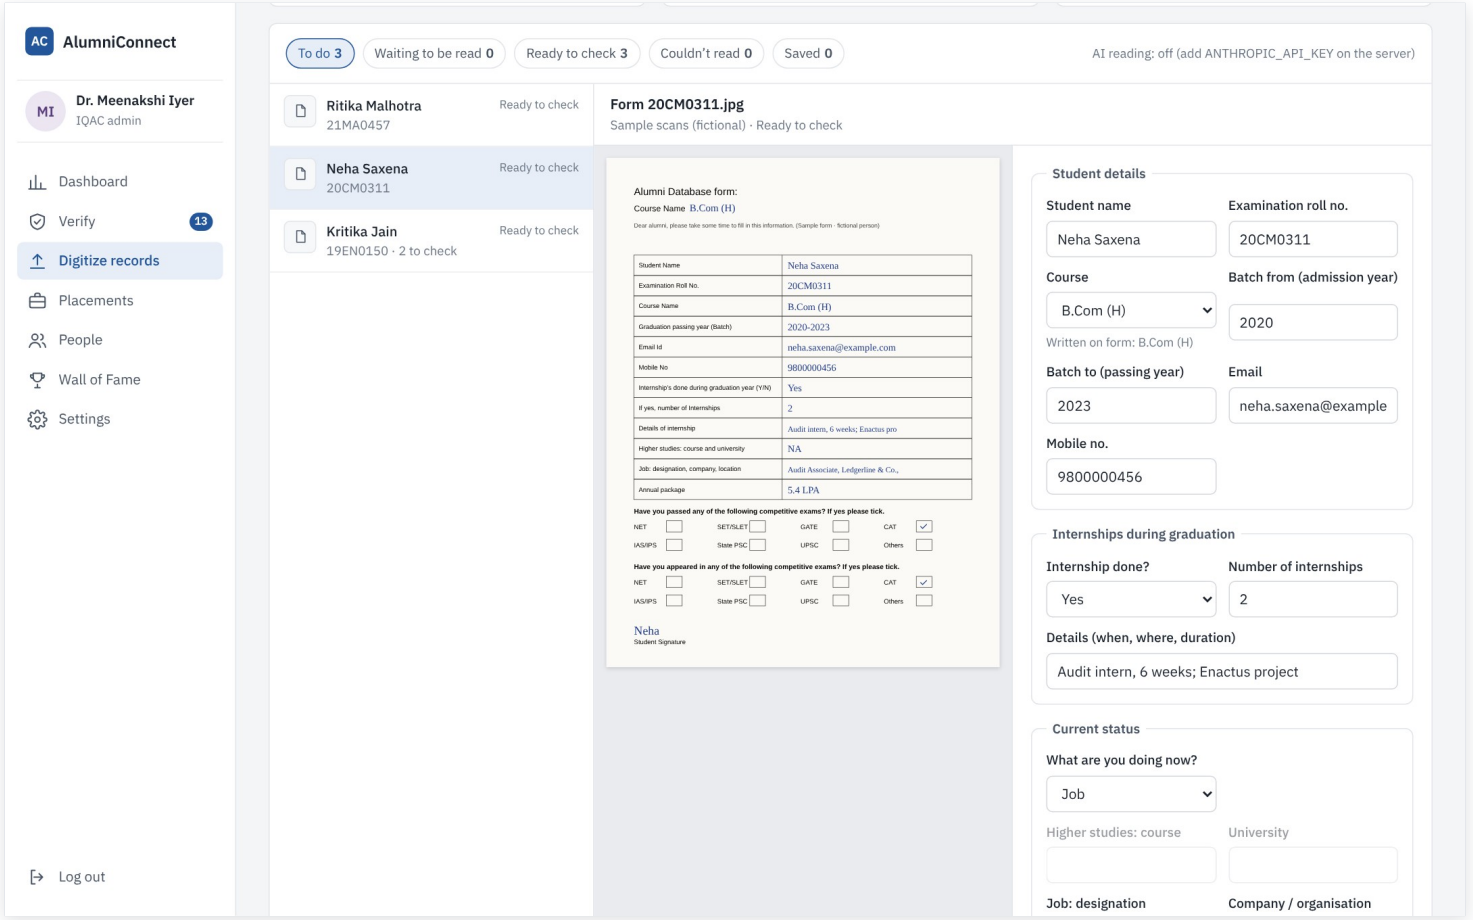

Routed automatically

To the department’s faculty verifier, or to IQAC for alumni updates.

Approve, ask, or reject

Students see the decision and the reason on their profile.

Digitizing 30,000 paper forms

Scan on the left, form fields on the right (fictional sample form)

1. Scan in bundles

Phone photos or scanner files, one form per file.

2. Or type it in

A screen laid out exactly like the paper form.

3. Or import Excel

Batches already in a spreadsheet go in through a template.

A person checks every record against the scan before it is saved. AI reading of handwriting is optional and only pre-fills the fields.

The paper alumni form, now online

Same questions

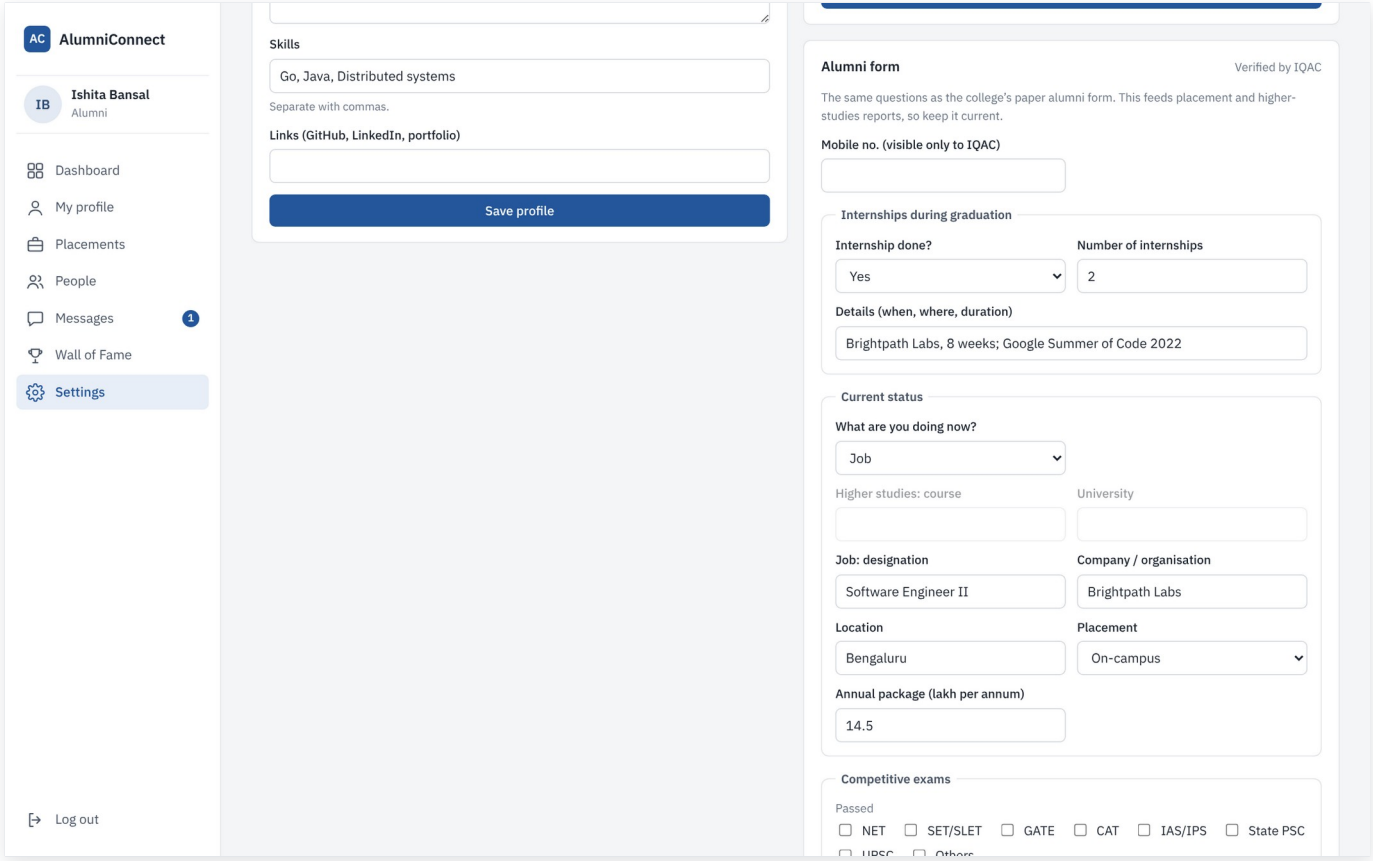

Internships, current status, course and university, or company, designation, location and package.

Exams in two rows

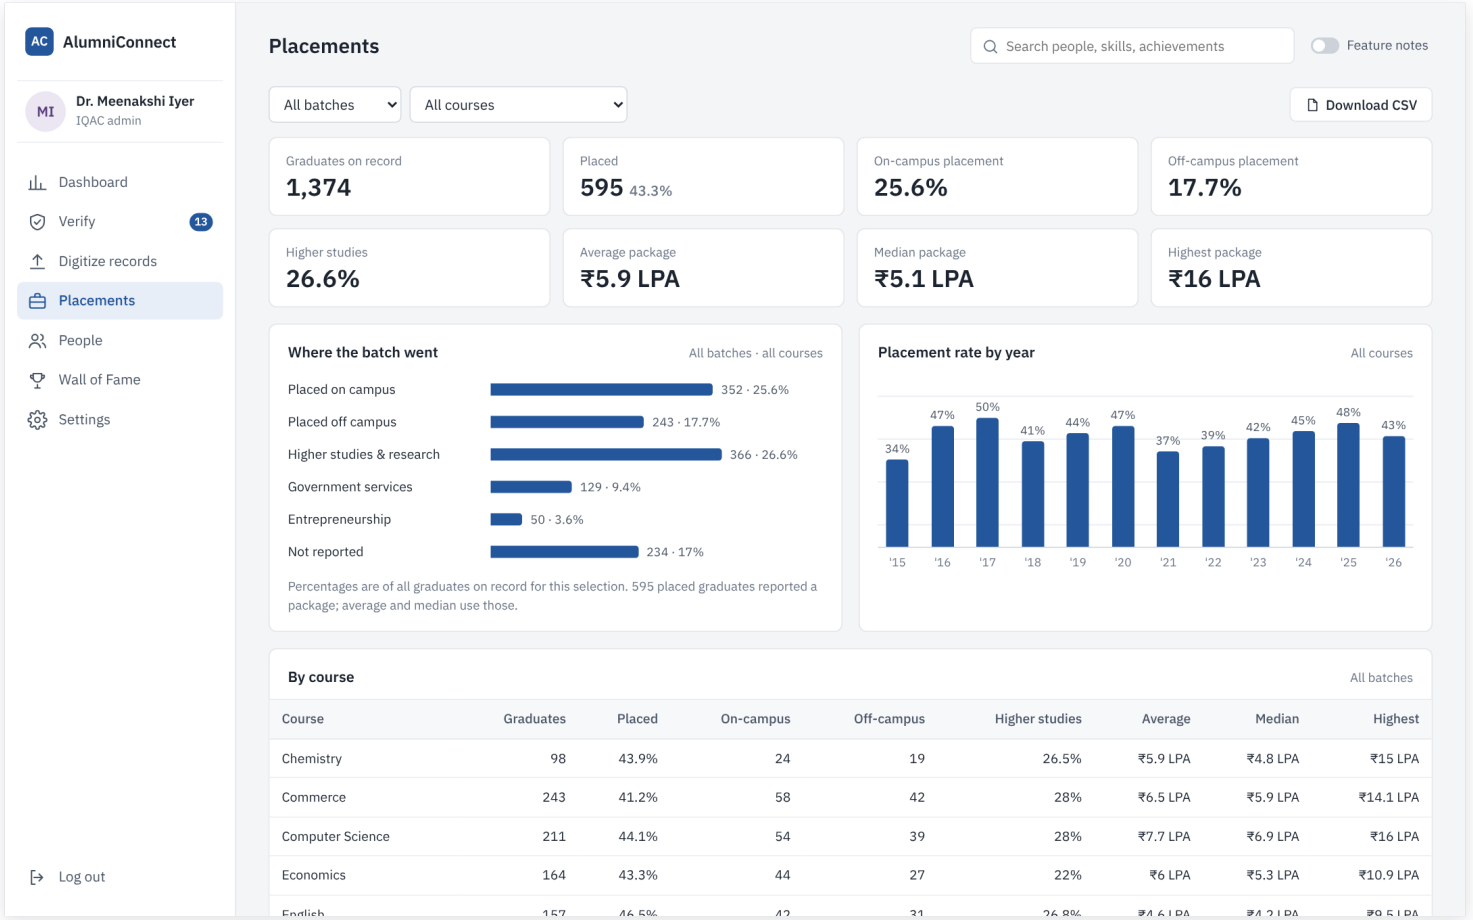

Passed and appeared: NET, SET/SLET, GATE, CAT, IAS/IPS, State PSC, UPSC, others.

Offer letter as proof

Alumni attach it once. IQAC verifies the form from Records.

Placement records, ready to present

Placed, on-campus, off-campus

As a share of each batch, with higher studies and other outcomes.

Average, median, highest

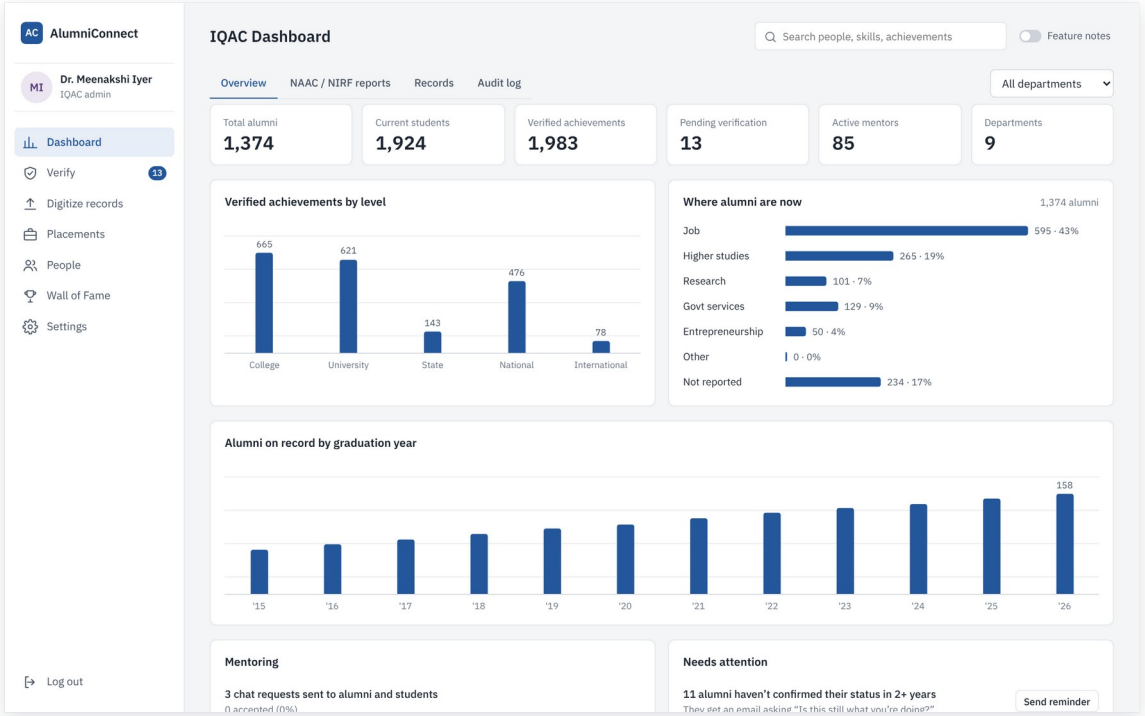

Packages by batch, by course, year by year and by recruiter.

Right level of detail

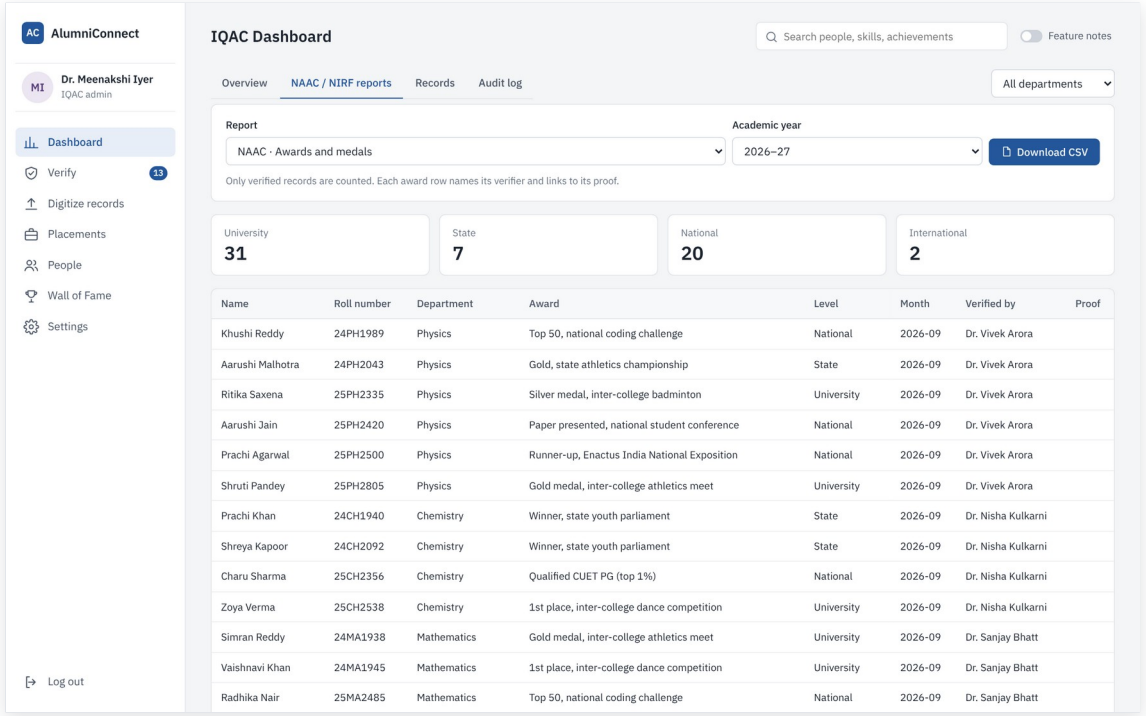

IQAC and faculty see names and download CSV. Students see totals only.

All figures are from the fictional sample data

IQAC dashboard and NAAC / NIRF reports

Live totals and charts, filterable by department

Awards report with the verifier and proof for every row, downloadable as CSV

Reports: student progression, awards and medals, NIRF graduation outcomes, alumni engagement. Every action is recorded in an audit log.

How a record moves through the system

Submitted

Student or alumna adds it, or IQAC enters a paper form

Verified

Faculty or IQAC checks the proof

On the profile

Shows as verified and becomes searchable

In the reports

Counts towards placements, NAAC and NIRF

Data is entered once, at the source, with proof. Every later use reads from the same verified record.

How it is built

Frontend

HTML, CSS and JavaScript. Works on phones and computers, no app install.

Backend

Node.js with Express, a REST API with role checks on every request.

Database

SQLite for the prototype. Standard SQL, so it moves to MySQL or PostgreSQL for production.

Security

Hashed passwords, secure session cookies, parameterised queries, proof files visible only to owner and verifiers.

Roles

Student, alumni, faculty verifier and IQAC admin each see only what they need.

Optional AI

Reads handwritten scans into fields when switched on. Nothing is saved without a person’s approval.

Rollout plan

Phase 1

Pilot

One department. Digitize one batch of paper forms and test with its students and alumni.

Phase 2

All departments

Faculty verifiers in every department. Older batches digitized in bundles by IQAC staff and volunteers.

Phase 3

Every year

Final-year students become alumni automatically. NAAC, NIRF and placement reports come straight from the system.

Not in this version yet: email notifications and attendance.

Thank you

Try it live: alumniconnect-cpva.onrender.com
